WHAT IS IPL?

IPL stands for Intense Pulsed Light.

- IPL Hair Removal is designed to help break the cycle of hair growth by targeting the hair root or follicle.
- Light energy is transferred through the skin's surface and is absorbed by the melanin present in the hair shaft.
- The absorbed light energy is converted to heat energy (below the surface of the skin), which disables the hair follicle preventing further growth.
- IPL is similar in a way to laser. However, laser is more concentrated and IPL uses a much broader spectrum of light in various colours & wavelengths.
- Both methods target the melanin in the hair follicle and can provide long-lasting results.
